

# HELP US DESIGN SAFE, SUSTAINABLE & COMFORTABLE OPERATING THEATRES OF THE FUTURE

Operating theatre design has remained unchanged for the last 60 years. Ventilation of theatres is the most carbon intensive activity in the NHS and may not be achieving the intended goals. Time for a change?

Researchers from the Departments of Medicine and Architecture and the BP Institute at the University of Cambridge are conducting an evidence-based study to design safe, sustainable operating theatres.

- Are you a surgeon, anaesthetist, ODP or theatre nurse?
- Would you like to have your say in the design of NHS operating theatres of the future?
- We would like to hear from you!

We are asking healthcare professionals to:

- Complete informed consent
- Participate in a video-conferencing interview for 30 minutes
- Fill in a short demographics questionnaire

\*All interviews will be recorded & transcribed
